

Manyam Geetha Sree

Full-Stack Developer | Software Engineering Student | AI Enterprise Technology Enthusiast
geethamsree9@gmail.com | LinkedIn | GitHub | LeetCode

EDUCATION

Nitte Meenakshi Institute of Technology

B.E. in Information Science Engineering | CGPA: 9.41/10

Bengaluru, Karnataka

2023 – 2027

Narayana Junior College

MPC | Percentage: 98.3%

Tirupati, Andhra Pradesh

2021 – 2023

Vijaya Bharathi English Medium High School

Percentage: 100%

Andhra Pradesh

2016 – 2021

EXPERIENCE

GenAI Intern

SURE ProEd

Jan 2026 – Present

Remote

- Develop GenAI applications using Retrieval-Augmented Generation (RAG), Semantic Search, AI Agents, LangChain, LangGraph, PocketFlow, Vector Databases, and embedding-based retrieval pipelines.
- Build intelligent AI systems including RAG chatbots, semantic search engines, document summarization assistants, and autonomous agent workflows using Python and modern AI frameworks.
- Implement FAISS indexing, document chunking strategies, embedding generation, API integrations, and workflow orchestration to improve retrieval efficiency and response quality.
- Collaborate on production-oriented AI solutions by designing scalable architectures and optimizing end-to-end LLM application workflows.

PROJECTS

AI Learning Assistant | MongoDB, Express.js, React.js, Node.js, GenAI APIs

2026

- Designed and developed a full-stack AI learning platform using the MERN stack with secure JWT authentication and RESTful APIs.
- Integrated Generative AI APIs to automate PDF-based question answering, flashcard generation, quiz creation, summaries, and personalized learning assistance.
- Implemented secure file upload and document processing pipelines for AI-powered knowledge retrieval.
- Developed responsive React interfaces that improved usability through an interactive chat-based learning experience.

Automation Workflows with n8n | n8n, Airtable, AI APIs

2025

- Designed workflow automation solutions using n8n to classify emails and generate AI-powered automated responses.
- Integrated Airtable databases and external AI APIs to automate structured data processing and workflow execution.
- Developed reusable no-code automation pipelines for AI-based recipe generation and content creation.

Explainable Concept Drift Detection & Adaptation Framework (Ongoing) | Python, Machine Learning, SHAP, LIME, Streamlit

- Develop a real-time machine learning framework for detecting and adapting to concept drift using XGBoost, Random Forest, and SVM models.
- Integrate Explainable AI techniques including SHAP and LIME to analyze prediction behavior and monitor feature importance across evolving datasets.
- Design an interactive Streamlit dashboard for real-time drift visualization, adaptive retraining, and model performance monitoring.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C

Web: React.js, Node.js, Express.js, HTML, CSS

Databases: MongoDB, MySQL

Core Concepts: DSA, OOPS, DBMS, Operating Systems, REST APIs

Tools: Git, GitHub, Postman, n8n, Airtable, Figma, Canva
